

Your website is hosted by Dryer Digital. Your domain DNS is managed in Cloudflare. Your **inbox** runs on **Google Workspace** (Gmail for business) at your domain (for example `you@yourbusiness.com`).

1. Recommended — Gmail app (iPhone & Android)

Adapted from Google Help: Add another account.

1. Install or open the Gmail app.
2. Tap your profile picture → **Add another account** → **Google**.
3. Sign in with the Workspace address we created and the password from your invite.
4. Complete 2-step verification if asked. Switch accounts from the profile menu.

2. iPhone / iPad Mail app

1. Settings → Mail → Accounts → Add Account → **Google**.
2. Sign in with your Workspace email and password.
3. Enable Mail (and optionally Contacts / Calendar) → Save.

Source: Apple Support — Set up email on iPhone.

3. Android (Samsung Email)

1. Open Samsung Email → Add account → Google.
2. Sign in with your Workspace address and finish sync.

4. Outlook (Windows, Mac, mobile)

1. Outlook → Add Account → enter your Workspace email.
2. Sign in on the Google screen (OAuth). Manual IMAP is usually not needed.

Manual servers if required (Google Help — IMAP): IMAP `imap.gmail.com` SSL 993; SMTP `smtp.gmail.com` TLS 587.

5. Apple Mail (Mac)

1. Mail → Settings → Accounts → + → Google.
2. Sign in and allow Mail access.

6. Using the new address beside your current Gmail

- Keep personal Gmail for friends/family; use Workspace for customers.
- Optional: forward old → new (or reverse) for 2–4 weeks.
- Optional: Gmail Settings → Accounts → Send mail as.
- Then update Google Business Profile, website contact, and socials.
